ABSTRACT OF THE DISCLOSURE

An electrophotographic photoconductor has an electroconductive support and a photoconductive layer which is formed thereon and contains at least one resin of a polyurethane resin, a polyester resin, or a polycarbonate resin, each resin having at least a structural unit of formula (1):

$$\begin{array}{c|c}
(R^1)_a & (R^2)_b \\
 & \downarrow \\
 & \downarrow \\
 & (CH_2)_n CH_3
\end{array}$$
(1)

wherein R^1 , R^2 , R^3 , a, b, and n are the same as those specified in the specification. An electrophotographic image forming apparatus and method, and a process cartridge employ the above photoconductor. A long-chain alkyl group containing bisphenol compound is represented by formula (2):

$$(R^{1})_{a}$$
 $(CH_{2})_{n}CH_{3}$ $(R^{2})_{b}$

HO
 $(CH_{2})_{n}CH_{3}$ $(R^{2})_{b}$ $(R^{2})_{b}$ $(R^{2})_{b}$
